headphone jack with support for stereo sound
Internal speaker with mono sound output

The audio system is carried out by the **Audio Processing Unit** (APU). APU is a Programmable Sound Generator with four channels.

Pulse waves have a very distinct *beep* sound that is mainly used for **melody or sound effects**.

Retired from: https://www.copetti.org/writings/consoles/game-boy

Oscilloscope view of all audio channels.

Pokemon Red/Blue (1996).
